

# Cloud Analytics Consulting

Step into the Cloud and realize value

Thinking of exploring the world of cloud computing? It can help you tap into value drivers like:

- Reducing your on-premises infrastructure
- Increasing scalability and addressing growing data
- Meeting business needs your current solution does not address

As your partners in data and analytics, Pythian is happy to offer our valued customers expert-led sessions where we will demonstrate various approaches addressing these and other benefits that you can factor into your future state.

Our expert-led sessions are designed to focus on your current environment, whether it's SQL Server, PostgreSQL, Oracle Database, MySQL or other relational databases and how the cloud can help with your current challenges. We take you through typical steps such as data extraction, processing and loading to modern cloud platforms. We will show you how various other organizations have gone through this process and we will provide you with tools to assess these options.

Through a collaborative workshop based approach we will cover:

- Identification of current pain points and challenges
- Discussion of current and future analytics use cases
- Overview of cloud platforms for analytics and how they can address your challenges
- Recommended next steps and analytics roadmap

At the end of this engagement, you will be able to plan your next steps with confidence that you are getting the best advice to bring your data and analytics solutions to the next level by applying Pythian's 25 years plus of experience in this space.

## Highlights

Insightful expert-led sessions that provide tools for you to plan

Our expert-led sessions are full of useful insights and actions such as:

- Typical business triggers for considering the cloud
- Review of tools and technology available to meet your needs
- De-coding cloud architecture in a way that is meaningful to your organization
- Giving insight on how to accommodate your business needs

**Valued insight to consider and plan next steps. Thinking about the cloud already? Try our [Cloud Analytics Assessment](#).**

## Data and analytics go hand in hand

With Pythian's focus on outcomes, everyone benefits:

- **IT professionals:** Managing databases and the related infrastructure is demanding. Uptime, scalability, new services and growing data have augmented demands. Discover how modern cloud platforms are a necessary step in an organization's evolution.
- **Analytics professionals:** Using your data and use case(s), see how a cloud data platform will deliver clean, integrated data from multiple data sources; create a single source of truth; and automate many time-consuming data-wrangling tasks. You'll also see how your data can be modeled to support a specific use case, then accessed easily via any SQL-based BI tool to support your self-service BI strategy.
- **Business professionals:** Experience the art of the possible—explore clean, integrated SAP data and find those unique insights that you can use to drive better business outcomes.
